

Kaarel Part

github.com/Karelak | partkaarel@gmail.com | linkedin.com/in/kaarelpert/

Description

A-Level graduate with a strong interest in backend software engineering, Python, Linux, and self-hosted infrastructure. Comfortable learning independently through documentation, building practical projects, and troubleshooting complex technical problems.

Work History

Aviation Report Search & Retrieval System (aaib-reports)

Github: <https://github.com/Karelak/aaib-reports>

- Built a Python pipeline to ingest AAIB reports from RSS feeds and APIs.
- Extracted and parsed PDF text and metadata for indexing.
- Evaluated Elasticsearch, vector databases, and hybrid MCP retrieval approaches.
- Shared the prototype with a public sector organisation evaluating commercial LLM search solutions, helping inform discussion around a lighter-weight retrieval approach.

Personal Portfolio Website (June 2026 - Present)

Built a personal portfolio website in Flask using Flask-WTF and Mailjet for email delivery. Later rebuilt the site in WordPress to broaden experience with CMS development and content management.

Paul Burton ADR - Client Website (June 2026 - July 2026)

Website: <https://paulburtonadr.com>

Designed and built a professional website for an independent mediator and arbitrator, presenting services and experience across commercial and private client dispute resolution.

Sanser - Client Website (July 2026 - Present)

Building a WordPress site for an Estonian events and hospitality business, covering their cocktail/mocktail bar, DJ, and event-hosting services.

Self-Hosted Infrastructure (September 2023 - Present)

Designed and maintain a multi-machine self-hosted infrastructure connected with Tailscale, using Docker containers, isolated networks, named volumes, and reverse proxying to deploy and manage services

across multiple machines.

Civil Aviation Authority, Crawley - Work Placement (May 2024)

Observed and supported staff in a professional office environment for a week; gained exposure to structured workflows, data handling, and workplace standards.

UK Fuel Finder API Client

Github: <https://github.com/Karelak/cheap-fuel-finder>

Developed a Python client for the UK government's Fuel Finder API, implementing its non-standard OAuth authentication flow and handling automated data retrieval.

A-Level Coursework Projects

Developed coursework projects including a Ticket Booking System, Car Park Management System (PyQt5), and an Encryption Program, covering GUI development, data handling, and applied cryptography. Published the projects on GitHub.

Education

The College of Richard Collyer, Horsham - A Levels (September 2024 - May 2026)

A Levels: Computer Science (A*), Electronics Engineering (A)

Skills

- Python
- Linux
- Docker & Docker Compose
- Git & GitHub
- REST APIs
- Flask
- Tailscale
- Reverse proxying
- WordPress
