Profile

A-Level graduate with a strong interest in backend software engineering, Python, Linux, and self-hosted infrastructure. Comfortable learning independently through technical documentation, building practical software projects, and troubleshooting complex systems. Interested in backend development, automation, infrastructure, and developer tooling.

Experience

Aviation Report Search & Retrieval System (aaib-reports)

GitHub: <https://github.com/Karelak/aaib-reports>

- Designed and developed a Python pipeline to ingest UK AAIB investigation reports from RSS feeds and public APIs, automating report collection and processing.
- Built PDF parsing and metadata extraction workflows to index accident reports for efficient searching and retrieval.
- Researched and evaluated Elasticsearch, vector databases, and hybrid MCP retrieval architectures to improve search quality for large technical document collections.
- Shared the prototype with a public sector organisation evaluating commercial LLM search platforms, contributing to discussions around lighter-weight retrieval approaches.

Personal Portfolio Website | June 2026 – Present

- Developed a personal portfolio website using Flask, Flask-WTF, and Mailjet to showcase projects and provide a secure contact form.
- Later rebuilt the website in WordPress to gain practical experience with CMS development, theme customisation, and content management.
- Managed deployment, hosting, and ongoing updates while maintaining responsive design across desktop and mobile devices.

Paul Burton ADR – Client Website | June 2026 – July 2026

- Designed and delivered a professional website for an independent mediator and arbitrator using Squarespace.
- Worked directly with the client to translate business requirements into a clear, professional online presence.
- Produced a responsive website highlighting professional services, experience, and contact information.

Sanser – Client Website | July 2026 – Present

- Building a WordPress website for an Estonian hospitality and events business covering cocktail and mocktail bars, DJs, and event hosting.
- Configuring and customising WordPress to meet client branding and business requirements.
- Managing hosting, deployment, and ongoing development while working directly with the client throughout the project.

Self-Hosted Infrastructure | September 2023 – Present

- Designed and maintain a multi-machine self-hosted infrastructure connected through Tailscale for secure remote access.
- Deploy and manage services using Docker, Docker Compose, isolated networks, persistent volumes, and reverse proxies.
- Configure and troubleshoot Linux servers, networking, containerised applications, and automated service deployments.
- Self-host a range of development and productivity services while gaining practical experience with infrastructure management and system administration.

Civil Aviation Authority | Work Placement | May 2024

- Completed a one-week work placement within a professional office environment at the Civil Aviation Authority.
- Observed structured engineering and administrative workflows while gaining experience of professional workplace standards.
- Assisted with routine tasks and developed an understanding of data handling and organisational processes.

UK Fuel Finder API Client

GitHub: <https://github.com/Karelak/cheap-fuel-finder>

- Developed a Python client for the UK Government Fuel Finder API.
- Implemented the API's non-standard OAuth authentication workflow to automate secure access.
- Built automated data retrieval functionality and documented the project on GitHub.

A-Level Software Projects

- Developed multiple software projects including a Ticket Booking System, Car Park Management System (PyQt5), and an Encryption Program.
- Applied object-oriented programming, GUI development, file handling, and basic cryptographic techniques throughout coursework.
- Published completed projects on GitHub with source code and documentation.

Education

The College of Richard Collyer | September 2024 – May 2026

A Levels

- Computer Science — A*

- Electronics Engineering — A
-

Technical Skills

Languages: Python

Operating Systems: Linux

Backend & APIs: REST APIs, Flask

Infrastructure: Docker, Docker Compose, Tailscale, Reverse Proxying

Tools: Git, GitHub, WordPress
